JAGGAER

Executive Summary

Contracts

e-Procurement

Direct Supplier Management

Sourcing

What's working:

- High performing levels of On-Contract spend drives cost savings through reducing maverick spend and increasing the number of transactions through catalogs and pre-negotiated contracts
- Adoption across the buyers of the full range of Sourcing features is at a good level
- A streamlined approval process for Purchase Orders is providing increased productivity for procurement professionals and freeing up time for more critical/higher value functions of the organizations

Improvement Opportunities:

- Increase the Spend Under Management in Jaggaer by enabling the goods and services users require most frequently to be available in eProcurement solution
- Increase the volume of Contracts utilizing the Digital Signature and Master Contract Document processes to ensure compliance and efficient approval
- Awarding in the solution would provide compliance, time saving and advanced scenario comparison over off-line awarding methods
